Biochemistry: Concepts and Connections engages students with a unique approach to visualization, synthesis of complex topics, and connections to the real world. The author team builds quantitative reasoning skills and provides students with a rich, chemical perspective on biological processes. The text emphasizes fundamental concepts and connections, showing how biochemistry relates to practical applications in medicine, agricultural sciences, environmental sciences, and forensics. The newly revised 2nd Edition integrates even more robust biochemistry-specific content in Mastering(tm) Chemistry, creating an interactive experience for today's students. New Threshold Concept Tutorials help students master the most challenging and critical ideas in biochemistry, while Interactive Case Studies connect course material to the real world by having students explore actual scientific data from primary

functioning. The Routledge Handbook on Biochemistry of Exercise is the first book to pull together the full depth and breadth of this subject and to update a rapidly expanding field of study with current issues and controversies and a look forward to future research directions. Bringing together many experts and leading scientists, the book emphasizes the current understanding of the underlying metabolic, cellular, genetic, and cell signalling mechanisms associated with physical activity, exercise, training, and athletic performance as they relate to, interact with, and regulate cellular and muscular adaptations and consequent effects on human health/disease, nutrition and weight control, and human performance. With more emphasis than ever on the need to be physically active and the role that being active plays in our overall health from a whole-body level down to the cell, this book makes an important
