Chapter

Computing IC design

flow. This is one of

the first books in

Approximate

Computing that

addresses the design

automation aspects,

aiming for not only

sketching the

possibility, but

providing a

comprehensive

overview of different

tasks and especially

Get Free

Chapter

how they can be  
implemented.

Automation, a  
mixture of  
algorithms, robots,  
software, and  
avatars, is  
transforming all  
types of jobs and  
industries. This book  
responds to one  
critical question for  
the design and

Get Free

Chapter

Construction

industry: “ how are  
architects, engineers,  
and contractors using  
information

technology to further  
automate their  
practices? ”

Addressing the use of  
new digital  
technologies,  
particularly  
parametric  
automation for

Get Free

Chapter

Fourteen

Design and  
construction in the  
building industry,  
this book looks at

Automation  
Techniques  
how technologically  
advanced

architectural and  
engineering practices  
are semi-automating  
their design

processes by using  
sophisticated  
algorithms to

transform their

Get Free

Chapter

workflows. The book also documents a set of firms that are further advancing automation by using pre-fabrication, modularization, and custom designs via robotics.

Explains how to use low power design in an automated design flow, and examine

# Get Free

## Chapter

the design time and performance trade-offs Includes the latest tools and techniques for low power design applied in an ASIC design flow Focuses on low power in an automated design methodology, a much neglected area

The second of two
