Diving medicine, also called undersea and hyperbaric medicine (UHB), is the diagnosis, treatment and prevention of conditions caused by humans entering the undersea environment. It includes the effects on the body of pressure on gases, the diagnosis and treatment of conditions caused by marine hazards and how relationships of a diver's fitness to dive affect a diver's safety.

Diving medicine - Wikipedia

UKDMC Welcome to the UK Diving Medical Committee. We advise on diving medicine issues, including assessment of fitness to dive.

UKDMC

A second concept essential to understanding diving medicine is the relationship between gas partial pressure and the ability of a gas to dissolve in a solute. Henry ' s Law states that the amount of gas which will dissolve in a liquid at any given temperature is a function of: 1) the partial pressure of the gas in contact with the liquid, and 2) the solubility coefficient of the gas in the liquid.

Diving Medicine - IAFF

Introduction. This book is the very first to cover the decompression theory in detail. It gives many information on all topics of the diving medicine, and is richly and uniquely illustrated. It offers a good guideline of high quality practice in diving medicine. The author provides a very structured and easy to understand book, by covering all aspects of the diving medicine, such as equipment, physiology, and related issues as gas intoxications, venomous animals or damages that can occur in ...
