Control System for Experimental Model of Electric Elevator

Introduction Controller circuits have many applications. One of them is elevator control. In this project, you are going to design a sequential logic circuit to control the operation of a three-story building's elevator and construct Verilog code and a constraints file that could be used to implement your circuit on a Basys 3 board.

Solved: Introduction Controller Circuits Have Many Applica ...

The elevator control system is able to restrict elevator button operation by interrupting the button wiring between the elevator car and the elevator control electronics. The elevator car floor button wiring is routed through the relays on the elevator control board before being connected to the elevator electronics.

Generally, Class 1 remote-control and signaling circuits must meet most of the same wiring requirements for power and light circuits. We commonly use Class 1 remote-control circuits in motor controllers (which operate mechanical processes), elevators, conveyors, and in equipment controlled from one or more remote locations.
