How does the internet work? - BBC Bitesize

So, What Is the Internet? 1. Wired Internet. This is the most common form of connection to the internet. Hundreds of thousands of miles of wires are laid throughout the world. 2. Satellite Internet. 3. Cellular Internet.

How Does the Internet Work? A Simple Explanation of the ...

You probably have your own "local area network" at home, and it's made up of all the devices connected to your router, which connects to the internet. The word "internet" refers to a worldwide system of "interconnected computer networks". That's all the internet really is—a large number of computer networks all over the world, connected together.

How Does the Internet Work?

The Internet is a malleable system -- it changes in little ways as elements join and leave networks around the world. Some of those elements may stay fairly static and make up the backbone of the Internet. Others are more peripheral. These elements are connections.

How does the Internet work? | HowStuffWorks

How the Internet Works The internet is a world-wide network of computers linked together by telephone wires, satellite links and other means. For simplicity's sake we will say that all computers on the internet can be divided into two categories: server s and browser s. Servers are where most of the information on the internet "lives".

How the Internet Works - Media College

The Internet could, theoretically, work by circuit switching—and some parts of it still do. If you have a traditional "dialup" connection to the Net (where your computer dials a telephone number to reach your Internet service provider in what's effectively an ordinary phone call), you're using circuit switching to go online.

How the Internet works: A simple introduction

The Internet & Your Website. This example may be pretty simplified, but it shows how all the pieces work together to deliver a website. While the internet uses many technical terms, the way it works is actually rather simple. What we know as "The Internet" is – for the most part – Corky's example repeated millions of times over.

How The Internet Works (In Simple Terms) - KindTyme

The message would start at the top of the protocol stack on your computer and work it's way downward. If the message to be sent is long, each stack layer that the message passes through may break the message up into... The packets would go through the Application Layer and continue to the TCP ...

How Does the Internet Work? - Stanford University

The Internet is the backbone of the Web, the technical infrastructure that makes the Web possible. At its most basic, the Internet is a large network of computers which communicate all together. The history of the Internet is somewhat obscure.

How does the Internet work? - Learn web development | MDN

The internet actually stands for "internetworking," and it represents how all telecommunication networks allow anyone the possibility to communicate with anyone else. Another way to describe the...

How Does the Internet Work? What You Really Need to Know

The Internet works because open standards allow every network to connect to every other network. This is what makes it possible for anyone to create content, offer services, and sell products without requiring permission from a central authority.
