area of clinical practice and research. For most of its 60 years, childhood psychopharmacology has played second fiddle to adult psychopharmacology but this is rapidly changing. The biological revolution has affected both child and adult psychiatry equally.

~~Psychopharmacology – an overview | ScienceDirect Topics~~
Psychopharmacology (from Greek ψυχή, psukhē, 'breath, life, soul'; φάρμακον, pharmakon, 'drug'; and -λογία, -logia) is the scientific study of the effects drugs have on mood, sensation, thinking, and behavior. It is distinguished from neuropsychopharmacology, which emphasizes the correlation between drug-induced changes in the functioning of cells in the nervous system and ...
