Many people enjoy researching their family history. However, have we stopped to ask ourselves if some of the things that we are doing within our family tree research are ethical? Have you asked people's permission to include them on your tree? What will you do if you discover secrets and lies? Should you tell your grandmother that her mother was six months pregnant when she got married? How do you approach people on your DNA testing site about matching and potentially collaborating? If you were adopted, would you try and trace your biological mother? If you have a Caribbean ancestor, how would you feel if your DNA ethnicity came back as Ghanaian? A variety of ethical dilemmas will be described and discussed, and adoption, DNA testing, and ethnicity will be discussed in detail. A brief overview of the history of genealogy, and its recent move towards professionalising will be addressed. What is the potential future of genealogy? Will computers fill out our tree for us? Should babies be DNA tested at birth? Will people in the future be able

A detailed and compelling look at distressed securities investing in today's market. In the corporate world, "vulture" investors in distressed securities serve the same cleanup function as vultures do in the natural world: they deal with failing companies, digest bad debt, and mop up after bankruptcies. Since this market's structural and legal complexities create greater inefficiencies than in other investment fields, it's a style of investing that can make money during both booms and busts. While recent economic carnage has made opportunities for vulture investors, more convoluted bankruptcies, conflicts of interest, and even government intervention have made this arena harder to negotiate. Nobody understands this better than author George Schultze, founder of Schultze Asset Management. During his successful career as a vulture investor, he's learned a number of lessons and developed an investment philosophy that has served him well. Now, in *The Art of Vulture Investing*, Schultze shares his valuable insights and experiences with you. Engaging and informative, this reliable guide offers a bird's-eye view into the opportunities and risks associated with vulture investing. And while it may not always be pretty, you'll see exactly why this process is necessary for our economic ecosystem. Throughout this book, Schultze explains the theory and strategy of vulture investing in clear and lively prose, illustrating each concept with examples from his own varied experience that show how the landscape has changed in recent years. A guided tour of the physical Internet, as seen on, above, and below the city's streets What does the Internet look like? It's the single most essential aspect of modern life, and yet, for many of us, the Internet looks like an open browser, or the black mirrors of our phones and computers. But in *Networks of New York*, Ingrid Burrington lifts our eyes from our screens to the streets, showing us that the Internet is everywhere around us, all the time—we just have to know where to look. Using New York as her point of reference and more than fifty color illustrations as her map, Burrington takes us on a tour of the urban network: She decodes spray-painted sidewalk markings, reveals the history behind cryptic manhole covers, shuffles us past subway cameras and giant carrier hotels, and peppers our journey with background stories about the NYPD's surveillance apparatus, twentieth-century telecommunication monopolies, high frequency trading on Wall Street, and the downtown building that houses the offices of both Google and the FBI's Joint Terrorism Task Force.

consumption per installed unit and to access wind energy at higher altitudes, where the wind is more consistent. The introductory chapter describes the emergence and economic dimension of airborne wind energy. Focusing on “Fundamentals, Modeling & Simulation”, Part I includes six contributions that describe quasi-steady as well as dynamic models and simulations of airborne wind energy systems or individual components. Shifting the spotlight to “Control, Optimization & Flight State Measurement”, Part II combines one chapter on measurement techniques with five chapters on control of kite and ground stations, and two chapters on optimization. Part III on “Concept Design & Analysis” includes three chapters that present and analyze novel harvesting concepts as well as two chapters on system component design. Part IV, which centers on “Implemented Concepts”, presents five chapters on established system concepts and one chapter about a subsystem for automatic launching and landing of kites. In closing, Part V focuses with four chapters on “Technology Deployment” related to market and financing strategies, as well as on regulation and the environment. The book builds on the success of the first volume “Airborne Wind Energy” (Springer, 2013), and offers a self-contained reference guide for researchers, scientists, professionals and students. The respective chapters were contributed by a broad variety of authors: academics, practicing engineers and inventors, all of whom are experts in their respective fields.
